

BBM104 SPRING TERM 2023 SMART HOME SYSTEM ASSIGNMENT CHECKLIST

- My nop() command works correctly but stable order of devices in z-report is not true as in example output.
- Some of the initial status of devices are being changed wrong at z-report. They become “off” or “on” at wrong times.
- NullPointerException might be thrown in some parts of code even if I tried to avoid them cautiously.
- I didn't test all the possible cases which is not in example inputs, so it is possible to see some exceptions or errors in “add” commands.
